Understanding Red Guppy Genetics

The vibrant shades of red in guppies result from a complex interplay of genetics. This guide delves into the genetic foundations of red guppy coloration, empowering you to create your own unique color strains.

- **Melanophores:** Pigments responsible for the black base coloration.
- **Erythrophores:** Red pigments that create the vibrant hues.
- **Xanthophores:** Yellow pigments that contribute to the overall coloration.

liXanthophores:

- **Iridophores:** Reflective pigments that create a shimmering effect.

Red Guppy Color Strains

This comprehensive guide showcases a wide array of red guppy color strains, each with its unique characteristics:

- **Japanese Red Guppy:** Classic solid red coloration with a metallic sheen.
- **Moscow Red Guppy:** Intense red body with a deep blue tail and dorsal fin.

- **Cobra Guppy:** Red body with black or blue patterns resembling a cobra's markings.
- **Tuxedo Guppy:** White body with a red head and tail, like a miniature tuxedo.
- **Fantail Guppy:** Long, flowing fins in shades of red and orange.
