Doe begins by introducing us to the concept of the "triple web." The surface web is the part of the internet that is accessible to everyone, and it includes all of the websites that you can find through search engines like Google. The deep web is the part of the internet that is not accessible to search engines, and it includes things like private databases, academic journals, and government documents. The dark web is the part of the internet that is only accessible through special software, and it includes things like illegal marketplaces, child pornography, and other dangerous content.

Doe spends the majority of her book exploring the dark web, and she paints a vivid picture of the dangers that can be found there. She tells stories of people who have been scammed out of their money, cyberbullied, and even stalked. She also discusses the role that the dark web plays in the spread of terrorism and other forms of violence.

Where Triples Go To Die is a gripping and thought-provoking book that will make you think twice about what you do online. It is a must-read for anyone who wants to understand the dangers of the dark web and how to protect themselves from them.
